hackAIR - collective awareness for air quality

Project

A European project building participatory tools and raising collective awareness for air quality

hackAIR is an EU-funded project aiming to develop an open technology platform for citizen observatories on air quality. It is supported through the EU programme on “Collective Awareness Platforms for Sustainability and Social Innovation” until December 2018.

Following a co-creation process with users and the development of the hackAIR platform and its components, the hackAIR platform will be pilot tested in Norway and Germany starting in September 2017 in order to validate the service platform and contribute towards individual and collective awareness about air quality in Europe, encouraging changes in behaviour towards air quality improvements.

By pilot testing the hackAIR platform and related collective sensing tools, the project aims to raise collective awareness about the daily levels of human exposure to air pollution.
