

OPEN MODELS FOR SUSTAINABILITY

Challenge

What if open business models fostered ecological transition ?

Language of your contribution : English Attached resources language : French

What are we talking about

In many sectors or industries, open models gain traction, with positive consequences in terms of innovation and access to knowledge. However, the positive environmental effects of such models are taken for granted without considering the negative effects (open source SUV) or rebound effects.

This project will :

- analyse the open models that explicitly target positive ecological effects
- identify the main contribution of open models to sustainability and the conditions for their scalability

Who coordinates

[Without model.](#)

Time frame : November 2015 - March 2016

Contributions and discussions will be synthesized in a publication in 2016.

How to contribute

You know a project or an initiative, you have an idea ? Share it in the "discussion" below.
